Command Center: The "war room" of the logistics world

Command Center is the cerebral cortex of the entire supply chain network, ensuring smooth transmission of information in real time across the hyper-connected, risk-intensive chain.

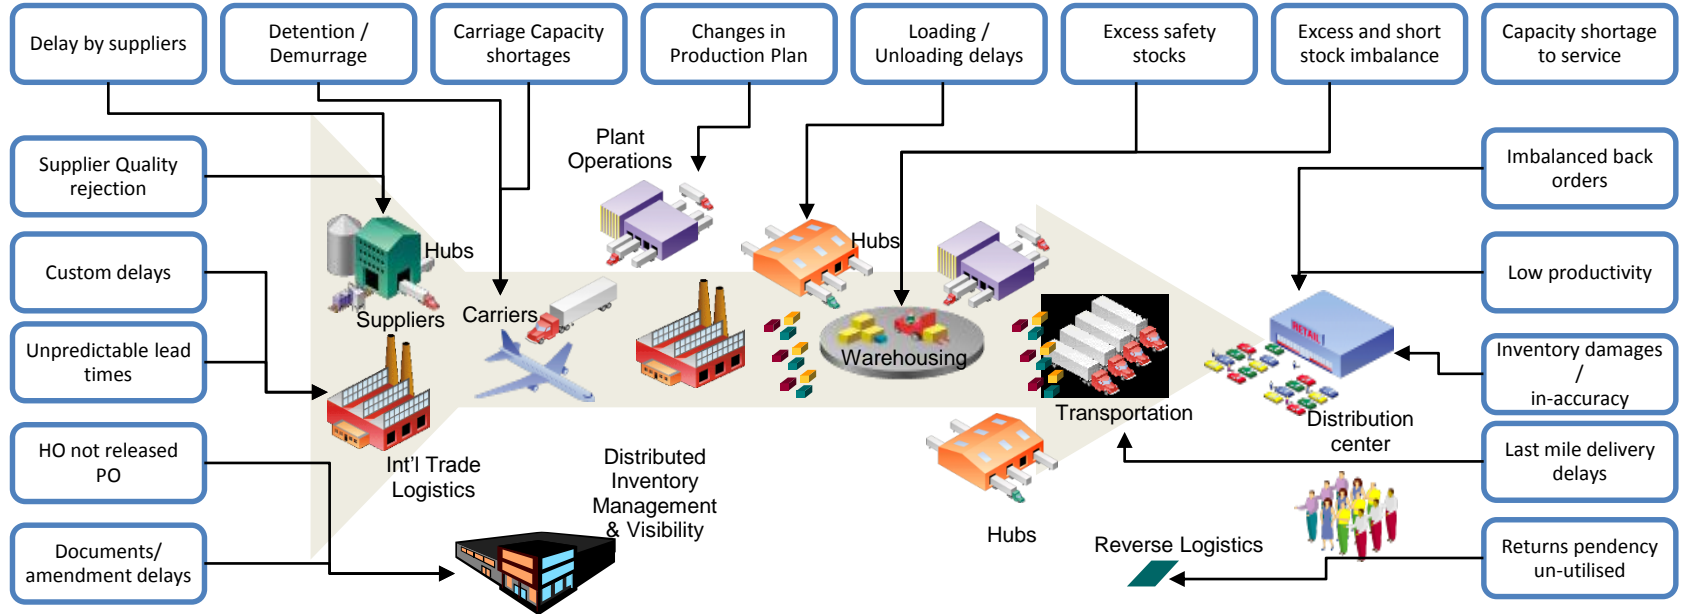

Managing **petabytes of data** to provide

Network & Resource Optimization Challenges to be addressed by CC

Inventory Optimization Challenges to be addressed by CC

Addressing the Challenges

Command Center overcomes all these challenges by creating a **centralized control tower of data management**.

These towers are at the core of every successful supply chain as they harness scarce resources and overflowing data to manage increasingly complex work within short time.

IT accesses multiple sources of real-time data (operational, historical, transient, ecosystem), collates and processes relevant data, and through a forecasting engine provides effective options after scanning all influencers.

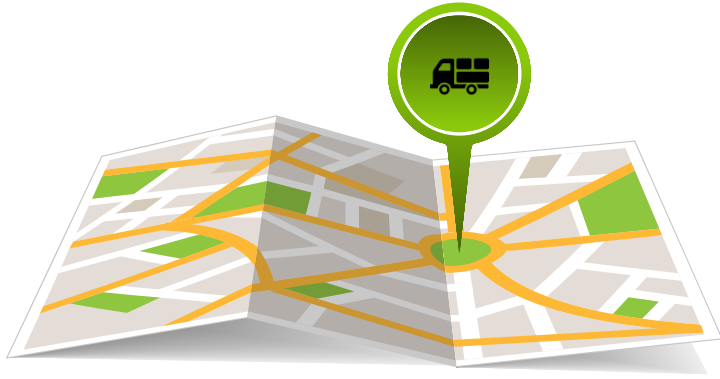

Order to Delivery

From the moment a consignment is dispatched till it reaches the intended delivery point, you will now have live, real time visibility through command center. Tracking an order continuously is as simple as a click of a button.

Products are getting to the customer faster with real time visibility, not one of your packages will be out of your sight.

Asset tracking & Adequacy

Command center gives the crucial visibility in terms of the location, capacity and transportation of assets at a granular level.

Smart sensors enable tracking of not only trucks but even wagons, ships or flights.

All your asset utilization details can be seen visually as well as in the reports format.

Queries

Command center supports you in providing visibility of inventory status at production, transportation, and warehousing capacity and possibility of roadblocks. This helps you plan / execute your operations efficiently.

It also helps you query any information be it operator efficiency, vehicle utilization history or trip reports anytime.

Events & Alerts

Unlike the old times, where an update about a delay because of an unplanned event reaches you hours after the event, with command center you get immediate alerts – be it Idling or breakdown or failed pickup alerts.

Command center also helps track vehicles with geo fenced routes to get products delivered safe & in-time. Any deviation of the vehicle from the planned route will trigger an alert to all concerned.

“Know Soon- Act Fast” is the key motto here.

A dark teal world map is centered in the background of the slide. The continents are visible in a slightly lighter shade of teal against the darker background.

Thank You
