## NACIL in tie up with Ramco Systems for troubleshooting

PBD BUREAU/PTI

MUMBAI, SEPT 24

NATIONAL Aviation Company of India Limited today said that it has entered into an agreement with Ramco Systems Limited to bring all maintenance, repair and overhaul operations on to a common IT platform.

NACIL is the holding company of national air carrier Air India and erstwhile Indian, while Ramco Systems is a leading aviation software solutions company.

"Air India will soon bring all areas of functioning of its maintenance, repair and over-

haul (MRO) facility on to a common IT platform with the objective of increasing aircraft availability, reducing inventory, ensuring quicker turn-around times and bringing cost-effectiveness," a press release issued here stated.

This software will help automate the business processes of line and heavy maintenance, component and engine maintenance, quality assurance, production, planning and control, material procurement, inventory,

payments and accounting functions, among others, it said.

The benefits of the solution include an improvement in the turn-around time of business processes, leading to increased aircraft availability, a reduced float requirement and a consequent reduction in inventory. It will also help increased productivity of all resources.

This would also enable the airline to improve revenue generation through more third-party MRO jobs, the release said, adding that the software will also be integrated with corporate ERP solutions in the near future.

# Ramco wins Air India's MRO order

S SHYAMALA

Chennai

SOFTWARE product company Ramco Systems announced on Monday that it has won an order from National Aviation Company of India (NACIL) to maintain, repair and overhaul (MRO) aircraft operations. NACIL runs Air India, Indian Airlines, Air India Express and Alliance.

As part of the agreement, Air India will soon bring all areas of functioning of its MRO facility to a common information technology platform to increase aircraft availability, reduce inventory, ensure quicker turnaround times and improve cost effectiveness, a company release said.

Ramco's software will help auto-

mate the business processes including line and heavy maintenance, component and engine maintenance, quality assurance, production, planning and control, material procurement, inventory, payments and accounting. This would also enable the airline to improve its revenue through more third party MRO jobs.

The software shall also be integrated with corporate ERP solution (enterprise resource planning) in the near future. The size of the deal was not revealed.

According to Kamesh Ramamoorthy, COO of Ramco, last year was a disaster for the aviation industry worldwide and this directly impacted the company. However, market conditions improved in the last two quar-

ters and Ramco is seeing traction for its maintain, repair and overhaul offerings in both the overseas and domestic segments, he told *FC*.

"We will announce a couple of mega deals in the aviation segment in the coming months. Ramco is hoping for about 50 per cent growth in the business especially from India, West Asia and North Africa," he added.

Close 40 per cent of Ramco's revenue comes from India, about 25 per cent from USA, 25 per cent from West Asia and Africa and 10 per cent from other geographies. Ramco Systems' standalone revenue increased from Rs 96.90 crore to Rs 108.85 crore for the year ended March 31, 2010.

Mumbai (IANS)- Air India has appointed Ramco Systems, a city-based software solutions provider, for designing an software package for its maintenance, repair and overhaul (MRO) facility, a spokesperson of the national carrier said here Friday.

AI plans to bring all MRO areas onto a common information technology platform with the objective of increasing aircraft availability, reducing inventory, ensuring quicker turnaround times and ensuring cost effectiveness.

The new software will help automate the business processes and heavy maintenance component and engine maintenance, quality assurance, production, planning and control, material procurement, inventory, accounting and payment function, besides others.

This would entail benefits like improvement in turnaround time of business processes, help increase aircraft availability, reduced float requirement and consequent reduction in inventory, besides increasing productivity of all resources.

The system would also help the airline to improve its revenue earning through more third party MRO jobs, the spokesperson said.
